| **Time taken** | 51 mins |
| **Marks** | 1.00/1.00 |
| **Grade** | **10.00** out of 10.00 (**100**%) |

**Question 1** | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
      printf("*");
    }
    else
    {
     for(int i=1; i<=n; i++)
     {
       for(int j=1; j<=n; j++)
       {
          printf("*");
          printf("*");
          break;
       }
     }
   }
 }
```

**Note:** No need of counter increment for declarations and scanf() and count variable printf() statements.

**Input:**

A positive Integer n

**Output:**

Print the value of the counter variable

**Answer:** (penalty regime: 0 %)

```
#include<stdio.h>
int count=0;
void func(int n)

    {

    if(n==1)

    {

      count++;
    }
    else
    {
        count++;
     for(int i=1; i<=n; i++)
     {
         count++;
       for(int j=1; j<=n; j++)
       {
           count++;
           count++;

          count++;

          break;
```

```
29        }
30        count++;
31      }
32      count++;
33    }
34  }
35  int main(){
36       int n;
37     scanf("%d",&n);
38     func(n);
39     printf("%d",count);
40  }
41
```

| | Input | Expected | Got | |
|---|---|---|---|---|
| ✔ | 2 | 12 | 12 | ✔ |
| ✔ | 1000 | 5002 | 5002 | ✔ |
| ✔ | 143 | 717 | 717 | ✔ |

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
